

CUSTOMER CASE STUDY

WE Energies – Tubulators

Company:

WE Energies Tubulators

Location:

Rothschild, Wisconsin

Date of Completion:

September 2012

Description:

BRUKS Rockwood supplied three Tubulator™ conveyors to the WE Energies Company in Rothschild, Wisconsin. The system transports wood chips and bark from neighboring Domtar Paper to be used for power generation. The Tubulator™ system includes the BRUKS fully-enclosed model CT830. A standard conveyor belt suspended on a light air cushion in an enclosed tube eliminates the use of idlers and walkways along the conveyor and allows for higher belt speeds and low-cost installation. This system utilizes 5 HP low pressure blowers located every 250 feet along the length of the conveyor to create the air cushion on both the transport and return side.
